

Dear Hiring Manager,

I'm applying for the entry-level Web / Software Developer position at your company. I've recently completed my MCA and I'm genuinely interested in building modern, user-friendly web applications while growing as a developer.

I have hands-on experience with HTML, CSS, JavaScript, and React.js, and I enjoy turning ideas into clean, responsive interfaces. I've worked on several projects, including a React-based Employee Management System where I handled CRUD operations, component reuse, and state management using React Hooks. Along with this, I've built JavaScript-based projects that focus on performance, interactivity, and good UI design.

I also have a basic understanding of backend concepts like REST APIs and SQL, and I regularly use Git and GitHub for version control. I actively practice problem-solving and have solved over 240 DSA problems, which has helped me improve my logic and coding approach.

I'm a motivated learner who enjoys improving skills, exploring new technologies, and working in team environments. I'm looking for an opportunity where I can contribute meaningfully, learn from experienced developers, and grow professionally.

Thank you for your time and consideration. I would love the opportunity to discuss how I can contribute to your team.

Best regards,

Rahul Diwakar
